

**THE ARK SERIES
MODULAR PLANTER SYSTEM™**

PLANTUS

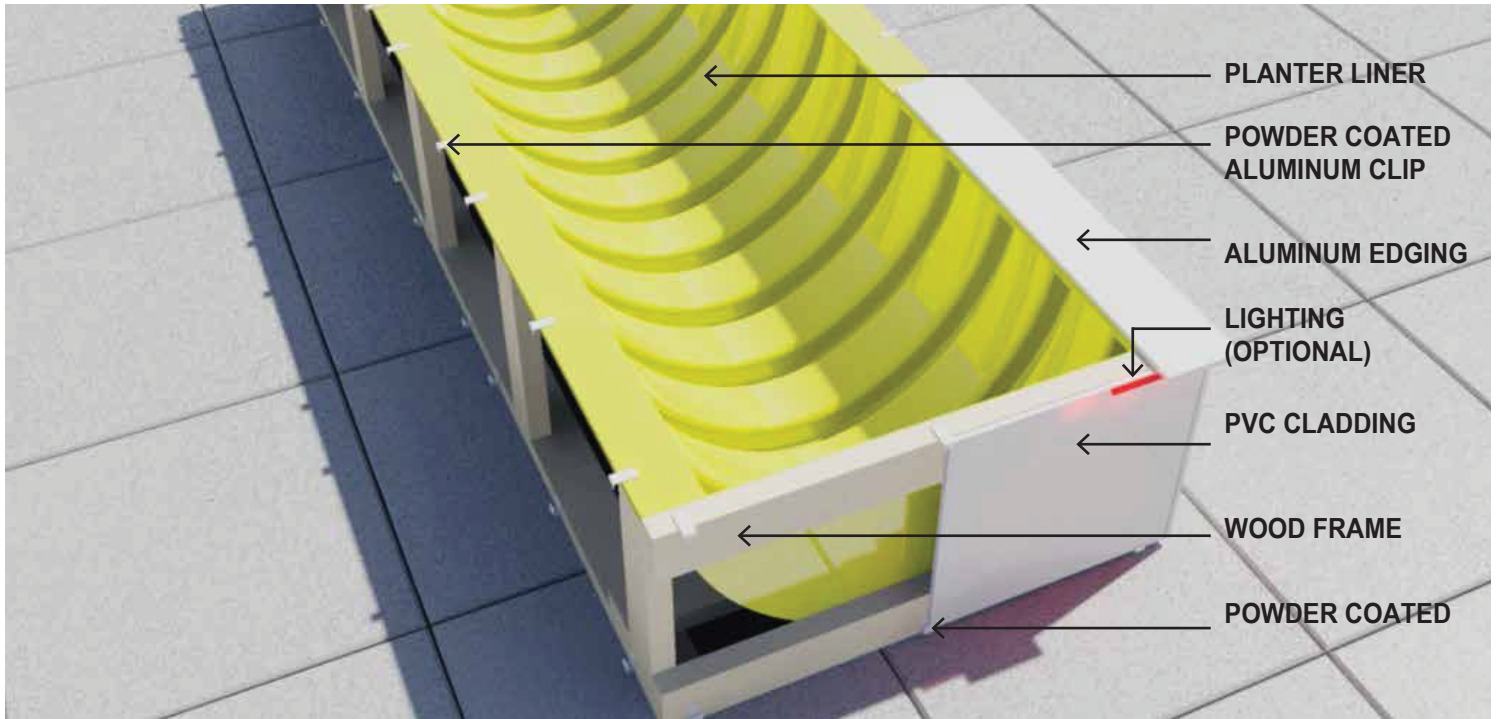

The ARK SERIES MODULAR PLANTER™ is a patented planter structure, custom-built to any length and configuration, assembled on-site into very large macro planters of up to several hundred feet. Appearing as one continuous structure, the planter's cladding walls are offered in a variety of skins, ranging from porcelain to LED illuminated glow walls. When strategically placed near busy streets, walkways, or within plazas, the elongated planter serves as a barrier for vehicular or pedestrian traffic. The planters utilize an open chamber structure, whose elliptical arch design requires 33% less soil and weighs less than traditional planters. This means they are easily relocated - a huge advantage in such settings as setbacks, rooftops, and terraces. Movable, wheeled versions are also available.

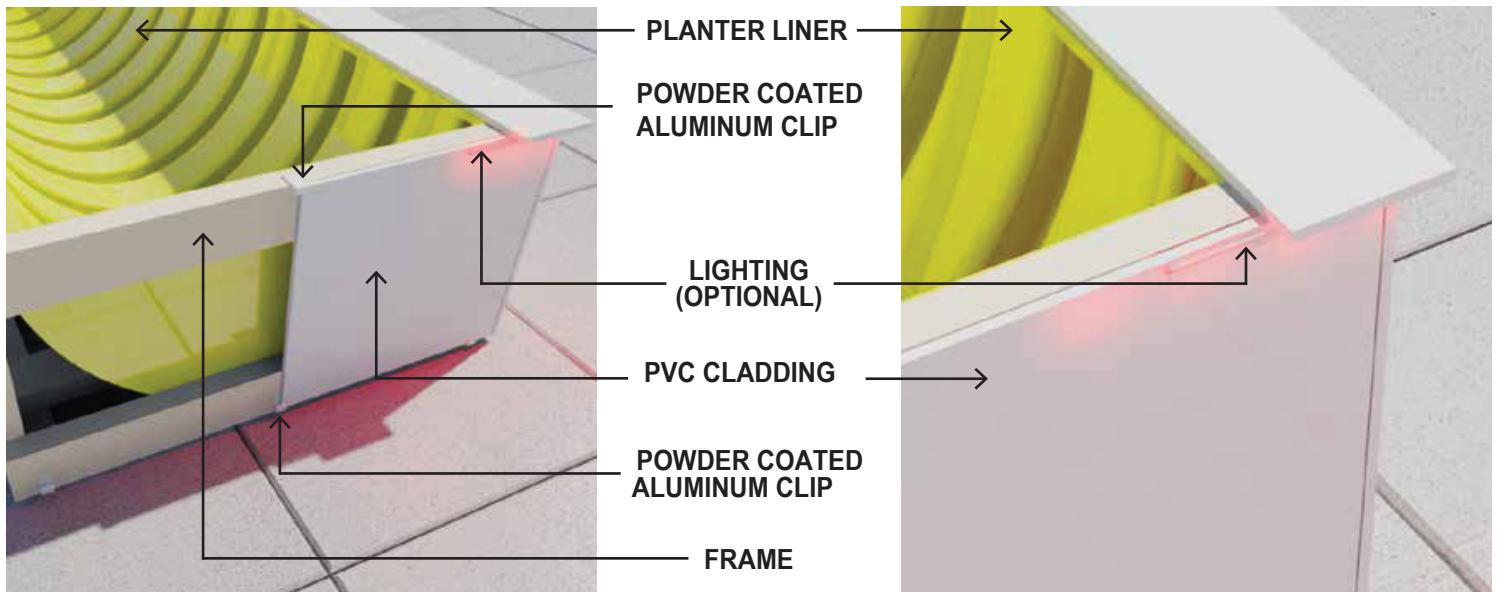

THE ARK SERIES MODULAR PLANTER SYSTEM™:

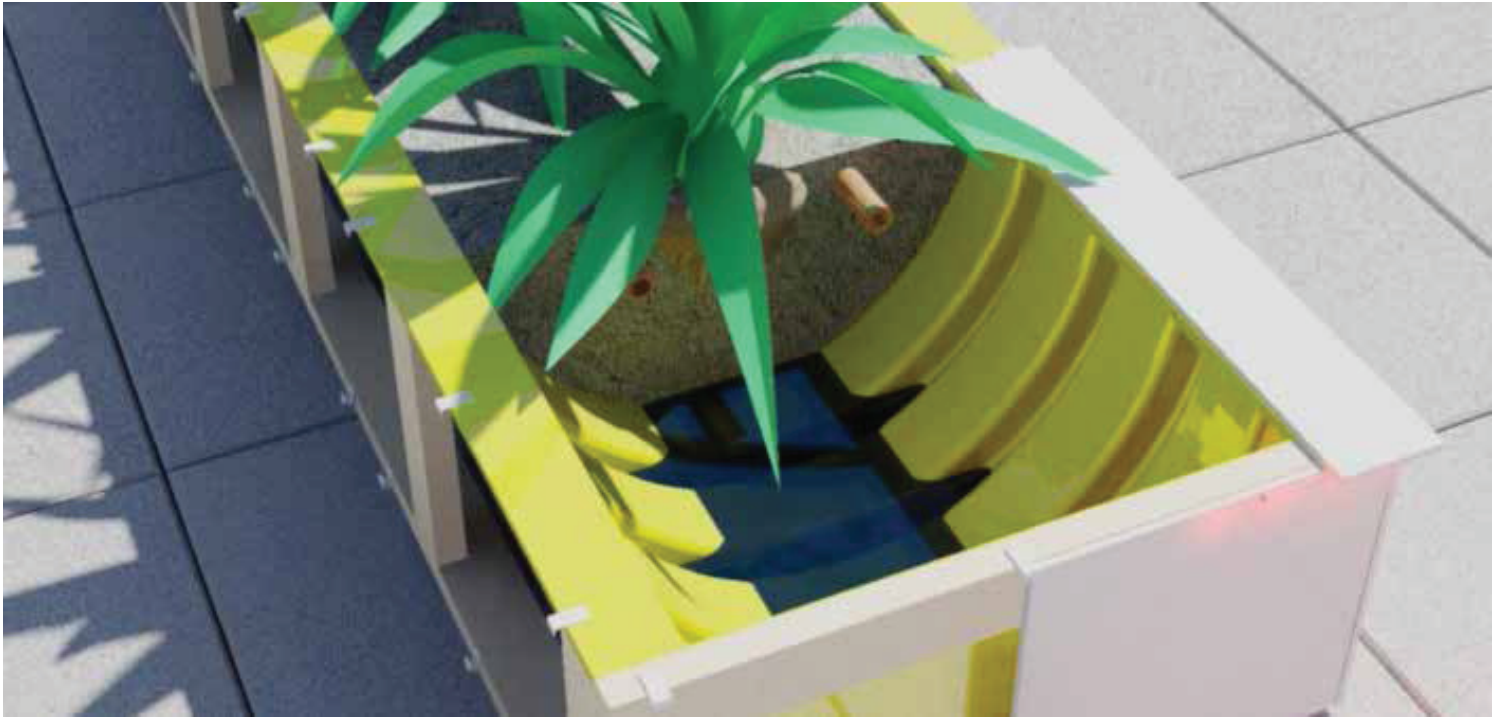

- Modular
- Movable, Wheeled Versions
- Continuous Root Zone
- Lightweight
- Variety of Custom Finishes
- Computer Controlled Lighting
- Customizable/Flexible
- All Weather
